

## Prescription

This course addresses key concepts, techniques and tools needed to provide security in computer and communications systems. Topics include the need for security, system and network security threats such as malware or denial-of-service attacks, secure systems design, identity management, authentication, access control, and computer network defence. Practical work will involve developing operating system and network security tools such as keyloggers as well as choosing and implementing appropriate security controls to meet a small organisation's network security needs. The examination will be related to the lecture material and learning during the assignments.

## Course learning objectives

Students who pass this course will be able to:

1. Define system and network security in terms of information properties and explain the importance of secure system design.
2. List and explain common TCP/IP protocols' vulnerabilities, associated attacks and, define existing countermeasures.
3. Compare and contrast different approaches to network defence such as access control, cryptographic mechanisms, host-based protection, firewalls, intrusion detection and prevention systems.
4. Evaluate a small organisation's network security needs and deploy network defences to enforce appropriate network security policies.

## Course content

The course is primarily offered in-person, but there will also be a remote option and there will be online alternatives for all the components of the course for students who cannot attend in-person.

Students taking this course remotely must have access to a computer with camera and microphone and a reliable high speed internet connection that will support real-time video plus audio connections and screen sharing. Students must be able to use Zoom; other communication applications may also be used. A mobile phone connection only is not considered sufficient. The computer must be adequate to support the programming required by the course: almost any modern windows, macintosh, or unix laptop or desktop computer will be sufficient, but an Android or IOS tablet will not.

If the assessment of the course includes tests, the tests will generally be run in-person on the Kelburn campus. There will be a remote option for students who cannot attend in-person, but the remote option imposes extra costs on the School and will be limited to students with a strong justification (for example, being enrolled from overseas). The remote test option will use the ProctorU system for online supervision of the tests. ProctorU requires installation of monitoring software on your computer which also uses your camera and microphone, and monitors your test-taking in real-time. Students who will need to use the remote test option must contact the course coordinator in the first two weeks to get permission and make arrangements.

=====

This course addresses key operating system and communication systems security concepts and discusses the vulnerabilities and threats associated with widely used communication protocols. The course also examines appropriate security controls and their implementation to meet a small

organisation's network security needs.

## Required Academic Background

Prerequisite courses: CYBR171, NWEN241, NWEN243

Students are required to have a basic understanding of security concepts (CYBR171), and have prior knowledge of networking and communication protocols (NWEN243) and operating system (Basic knowledge of Linux and Shell scripting)

## Withdrawal from Course

Withdrawal dates and process:

## Teaching Format

This course will be offered in-person and online. For students in Wellington, there will be a combination of in-person components and web/Internet based resources. It will also be possible to take the course remotely for those who cannot attend on campus, with all the components provided in-person also made available online.

There are two lectures per week which will be recorded and accessible through Blackboard.

Lab sessions are however not recorded. Instructions for each lab session will be provided before the session date on the course website.

Students are required to read the lab documents thoroughly, complete the tasks and submit them by the due date specified in each lab document.

Students may attend the lab sessions in person or complete the labs remotely and submit the results accordingly through the ECS submission system.

## Student feedback

Student feedback on University courses may be found at:

[www.cad.vuw.ac.nz/feedback/feedback\\_display.php](http://www.cad.vuw.ac.nz/feedback/feedback_display.php)

## Dates (trimester, teaching & break dates)

- Teaching: 22 February 2021 - 28 May 2021
- Break: 05 April 2021 - 18 April 2021
- Study period: 31 May 2021 - 03 June 2021

- Exam period: 04 June 2021 - 19 June 2021

## Class Times and Room Numbers

### 22 February 2021 - 04 April 2021

- **Tuesday** 12:00 - 12:50 – MT228, Student Union, Kelburn
- **Thursday** 12:00 - 12:50 – LT323, Hunter, Kelburn

### 19 April 2021 - 30 May 2021

- **Tuesday** 12:00 - 12:50 – MT228, Student Union, Kelburn
- **Thursday** 12:00 - 12:50 – LT323, Hunter, Kelburn

## Other Classes

Students must sign up in myAllocator for a regular one-hour lab session.

## Set Texts and Recommended Readings

### Required

Guide to Network Defense and Countermeasures, 3rd Edition by Randy Weaver, Dawn Weaver, Dean Farwood is primarily used throughout the course and includes most of the topics covered in this course. Additional notes are provided before/after each lecture session accordingly.

## Mandatory Course Requirements

In addition to achieving an overall pass mark of at least 50%, students must:

- Achieve at least a **D** grade in the final examination, because the examination assesses understanding of concepts and learning from assignments independently.
- Submit at least three of the five lab exercises over the duration of the course.
- Make a reasonable attempt at all major assessments/assignments.

*If you believe that exceptional circumstances may prevent you from meeting the mandatory course requirements, contact the Course Coordinator for advice as soon as possible.*

## Assessment

The assignments will apply the concepts learnt in the lectures and laboratory sessions, while the final assessment will be related to the lecture materials and learnings during the assignments.

Assessment Item	Due Date or Test Date	CLO(s)	Percentage
Assignment One	Week 6	CLO: 1,2	30%
Assignment Two	Week 9	CLO: 3,4	30%
Final Assessment	TBA	CLO: 1,2,3,4	20%
Lab activities (5 labs, Weeks 2, 5, 7, 9 and 11)	2 weeks after each lab is announced and released.	CLO: 1,2,3,4	20%

## Penalties

Late assignment submissions will receive a penalty of 10% for each late day (pro-rata).

## Extensions

Each student will have three "late days" which you may choose to use for any assignment or assignments during the course. There will be no penalty applied for these late days. You do not need to apply for these, instead any late days you have left will be automatically applied to assignments that you submit late.

## Submission & Return

All work is submitted through the ECS submission system, accessible through the course web pages. Marks and comments will be returned through the ECS marking system, also available through the course web pages.

## Marking Criteria

All assessments are marked according to the scheme produced by the lecturers and specified in each assessment document.

## Workload

The total workload for CYBR 371 is 150 hours. In order to maintain satisfactory progress in this course, you should plan to spend an average of 10 hours per week on this course. An approximate breakdown for these hours would be:

- Lectures and laboratories: 4 hours per week
- Consolidating lectured material, through readings, completion of exercises, worksheets: 3 hours per week
- Assignments: 3 hours per week

## Teaching Plan

See [https://ecs.wgtn.ac.nz/Courses/CYBR371\\_2021T1/LectureSchedule](https://ecs.wgtn.ac.nz/Courses/CYBR371_2021T1/LectureSchedule)
