

Prescription

This course introduces fundamental electronic devices and their circuit applications. Topics include semiconductor fundamentals, diodes, transistors and operational amplifiers and the operation and application of special function diodes such as light emitting diodes and solar cells. Prototyping and testing of practical circuits using these electronic devices will be addressed in the laboratory sessions.

Course learning objectives

Students who pass this course will be able to:

1. Use a range of electronic measuring instruments (BE Graduate Attribute 3(a)).
2. Use their understanding of the basic characteristics of semiconductor materials to explain the design of diodes, transistors and other related devices (BE Graduate Attributes 3(a) & 3(b)).
3. Describe the functions and current-voltage characteristics of diodes and transistors and calculate circuit characteristics and behaviour employing these devices (BE Graduate Attribute 3(a) & 3(b)).
4. Design, prototype and test basic circuits that contain active devices (BE Graduate Attribute 3(c) & 3(f)).

Course content

In 2021, it will be possible to take this course remotely, and distance-based versions of the lectures, labs, and all other material will be available. However, the resources for the remote alternative to the labs are limited, and the remote option will only be available for students with a good justification (for example, enrolling from overseas). Students who can be in Wellington must participate in the face-to-face labs to develop the critical practical lab knowledge and skills for the course.

Students taking this course remotely must have access to a computer with camera and microphone and a reliable high speed internet connection that will support real-time video plus audio connections and screen sharing. Students must be able to use Zoom; other communication applications may also be used. A mobile phone connection only is not considered sufficient. The computer must be adequate to support the programming required by the course: almost any modern windows, macintosh, or unix laptop or desktop computer will be sufficient, but an Android or IOS tablet will not.

If the assessment of the course includes tests, the tests will generally be run in-person on the Kelburn campus. There will be a remote option for students who cannot attend in-person and who have a strong justification (for example, being enrolled from overseas).

The remote test option will use Zoom for online supervision of the tests and you must be able to use Zoom with a camera, microphone, and screen-sharing. Students who will need to use the remote test option must contact the course coordinator in the first two weeks to get permission and make arrangements.

=====

Withdrawal from Course

Withdrawal dates and process:

Lecturers

Ramesh Rayudu (Coordinator)

ramesh.rayudu@vuw.ac.nz 04 4635233 ext 8068

421 Alan MacDiarmid Building, Kelburn

Gideon Gouws

Gideon.Gouws@vuw.ac.nz 04 4635952

225 Alan MacDiarmid Building, Kelburn

Teaching Format

The theoretical aspects of the course will be taught through a combination of lectures and tutorials. At the same time a strong emphasis is placed on practical skills and the use of measurement instrumentation, design construction and testing skills are covered in laboratory work.

Student feedback

Towards the end of the course, student surveys on both the course lecturing and the course itself will be carried out.

Dates (trimester, teaching & break dates)

- Teaching: 05 July 2021 - 08 October 2021
- Break: 16 August 2021 - 29 August 2021
- Study period: 11 October 2021 - 14 October 2021
- Exam period: 15 October 2021 - 06 November 2021

Class Times and Room Numbers

05 July 2021 - 15 August 2021

- **Monday** 12:00 - 12:50 – 104, Alan MacDiarmid Building, Kelburn
- **Wednesday** 12:00 - 12:50 – 104, Alan MacDiarmid Building, Kelburn
- **Friday** 12:00 - 12:50 – 104, Alan MacDiarmid Building, Kelburn

30 August 2021 - 10 October 2021

- **Monday** 12:00 - 12:50 – 104, Alan MacDiarmid Building, Kelburn
- **Wednesday** 12:00 - 12:50 – 104, Alan MacDiarmid Building, Kelburn
- **Friday** 12:00 - 12:50 – 104, Alan MacDiarmid Building, Kelburn

Set Texts and Recommended Readings

Required

There are no required texts for this offering.

Mandatory Course Requirements

There are no mandatory course requirements for this course.

If you believe that exceptional circumstances may prevent you from meeting the mandatory course requirements, contact the Course Coordinator for advice as soon as possible.

Assessment

The course assessment include four labs, two design sessions performed in the lab, two tests and five assignments.

Assessment Item	Due Date or Test Date	CLO(s)	Percentage
4 Labs: work logs, demonstrations, and brief reports (scheduled lab sessions plus 1 additional hour per lab)	TBC	CLO: 1,2,3,4	16%
One design exercise with design report (10 hrs including time spent in two lab sessions)	TBC	CLO: 1,3,4	9%
Two Tests (1.5 hour duration each)	TBC	CLO: 2,3,4	50%
Five Assignments	TBC	CLO: 2,3,4	25%

Penalties

All work is due in on the due date. Marks will be deducted at a rate of 10% of the full mark for each working day late. Work will not be marked if more than one week late or if the model answers have already been handed back to the class.

Extensions

All work is due in on the due date and individual extensions will only be granted in exceptional personal circumstances, and should be negotiated in writing with the course lecturer before the deadline whenever possible. Documentation (eg, medical certificate) may be required.

Submission & Return

All work must be submitted online on the ECS Submission system. Any work that is late (after the due date) will incur penalties unless stated otherwise by the course lecturer. Marked material will be available with feedback on the Wiki.

Workload

The student workload for this course is 150 hours.

In order to maintain satisfactory progress you should plan to spend an average of 10 hours per week on this course. A plausible and approximate breakdown for these weekly hours would be:

- Lectures and tutorials - 3 hours

- Laboratory work and writeup - 4 hours:
- Self-study - 3 hours

Additional time will be required for tests.

Teaching Plan

The planned course content is as follows:

Semiconductor Properties: basic properties of intrinsic and extrinsic semiconductors

Diodes: p-n junctions, biasing, diode characteristic, diode models, rectification and diode applications, light emitting diodes and other diodes.

Bipolar Junction Transistors (BJTs): structure and operation, current gain, transconductance, input, transfer and output characteristics, BJT as an amplifier - inverting amplifier, dc biasing, small signal approximations, different transistor configurations, Class A amplifier design.

MOSFETs: structure and operation, input, transfer and output characteristics, dc circuits, MOSFETs as logic gates and amplifiers

New Topics: Introduction to IGBTs and Thyristors.

Communication of Additional Information

This course uses ECS Wiki (https://ecs.wgtn.ac.nz/Courses/EEEN204_2021T2/). Course materials and other information will be posted on ECS Wiki. Students should check ECS Wiki regularly. Please ensure that the email address you have provided for university administration is correct in order to receive notifications from staff. Recorded lectures are available through the normal channel(BlackBoard) as other courses.

Offering CRN: [33056](#)

Points: 15

Prerequisites: (ENGR 122 or MATH 142); (ENGR 142 or PHYS 115);

Restrictions: ECEN 204

Duration: 05 July 2021 - 07 November 2021

Starts: Trimester 2

Campus: Kelburn
