

# SWEN 438 — DevOps Tools

James Quilty

School of Engineering and Computer Science  
Victoria University of Wellington

# DevOps Tools

Today we're going to cover some core DevOps Tools that will help with the rest of the course:

- pre-commit
- ssh — the Secure Shell
- tmux — a Terminal Multiplexer
- dotfile management
- shells
- package managers

The visual aids for today's lecture will be the command line and various web pages (URLs are given in the lecture notes).
