

Advanced Signal Processing - Course Outline

ECEN 421: 2016 Trimester 1

This document sets out the workload and assessment requirements for ECEN 421. It also provides contact information for staff involved in the course. If the contents of this document are altered during the course, you will be advised of the change by an announcement in lectures and/or on the course web site. A printed copy of this document is held in the School Office.

Objectives (and associated graduate attributes)

The goal of ECEN 421 is to provide a geometric intuition to signal processing. This geometric point of view is a powerful tool for the understanding of signal processing techniques including Fourier transforms, sampling theorems, time-frequency analysis and wavelets. The course provides the mathematical depth and rigor that is necessary for the study of more advanced topics in signal processing, well as providing the details of applications including as image compression, audio coding, and mobile sensing.

By the end of the course, students will be able to:

1. Use the right tools to tackle advanced signal and data processing problems 3(a), 3(b)
2. Have an intuitive understanding of signal processing through a geometrical approach 3(a), 3(e).
3. Know the applications of signal processing that are of interest today 3(b), 3(f).
4. Understand topics that are at the forefront of signal processing research 3(a), 3(f).

Textbook

The textbook for ECEN 421 is M. Vetterli, J. Kovacevic and V. Goyal, "Foundations of Signal Processing", Cambridge U. Press, 2013. Downloadable at <http://www.fourierandwavelets.org>. This free version does not contain homework problems, which will be handed out on paper separately.

Course Content

The following is an outline of the topics covered in the lectures.

- Vector spaces
- Infinite Dimensions
- Hilbert Spaces
- Operators
- Bases
- Dual bases
- Frames
- Stochastic processes
- Correlation functions and systems
- The Weiner Filter
- The Matched Filter
- AR and ARMA models
- Spectrum estimation using AR processes, Yule-walker equations
- Subspace frequency estimation
- Cramer Rao Bound, including asymptotic bound
- Linear Estimation
- Maximum Likelihood estimation
- Bayesian estimation

Lectures, Tutorials, Laboratories, and Practical work

A schedule of lecture topics, readings, and assignment due dates is available online

Lectures for ECEN 421 are: Monday, Wednesday and Friday at 2:10pm in von Zedlitz 108. The course runs from 29 Feb - 23 Mar and 31 Mar - 22 Apr and 2 May - 3 Jun 2016.

There are no labs for ECEN 421 in 2016

Assignments

There are 10 written assignments, each due on Monday, except for the last which is due on the last Friday. There is no assignment due on Feb 29 (week 1) or Mar 21 (when there will be a test). All assignments are individual (i.e., there is no group work).

Workload

In order to maintain satisfactory progress in ECEN 421, you should plan to spend 150 hours on this course: an average of at least 10 hours per week for 15 weeks. For the 12 teaching weeks, a plausible and approximate breakdown for these hours would be:

- Lectures and tutorials: 3 hours/week
- Readings: 2 hours/week
- Assignments: 5 hours/week

School of Engineering and Computer Science

The School office is located on level three of the Cotton Building ([Cotton 358](#)).

Staff

The course organiser and lecturer for ECEN 421 is [Paul Teal](#). His contact details are:

- Paul Teal
- [McDiarmid AM 420](#)
- +64 4 463 5966
- paul.teal@vuw etc

The best time to ask questions on ECEN 421 is Fridays 3pm-5pm.

The class rep for ECEN 421 is Lohit Petikam (email: sternutator at gmail dot com). You can go to your class rep if you do not want to speak to the lecturers directly about something relating to ECEN 421.

Announcements and Communication

The main means of communication outside of lectures will be the ECEN 421 web area at http://ecs.victoria.ac.nz/Courses/ECEN421_2016T1/. There you will find, among other things, this document, and the [lecture schedule](#).

Assessment

Your grade for ECEN 421 will be determined based on the following assessment weightings:

Item	Weight
10 written assignments	20%
Mid-term Test (21 March)	20%
Final Examination (3 hours)	60%

Bachelor of Engineering students should be aware that copies of their assessed work may be retained for inspection by an IPENZ appointed accreditation panel.

Policies and penalties for late submission

The best 9 marks for the 10 written assignments will be counted to the 20% for the assignments. Because of the rapid turnaround of these small assignments, late submissions will not be accepted.

Tests and Exams

The [timetable for final examinations](#) will be available from the University web site and will be posted on a notice board outside the faculty office. The final examination will be three hours long. No computers, electronic calculators or similar device will be allowed in the final examination. Paper non-English to English dictionaries will be permitted. The examination period for trimester 1 is 10 June - 29 June.

Plagiarism

Working Together and Plagiarism

We encourage you to discuss the principles of the course and assignments with other students, to help and seek help with programming details, problems involving the lab machines. However, any work you hand in must be your own work.

The [School policy on Plagiarism](#) (claiming other people's work as your own) is available from the course home page. Please read it. We will penalise anyone we find plagiarising, whether from students currently doing the course, or from other sources. Students who knowingly allow other students to copy their work may also be penalised. If you have had help from someone else (other than a tutor), it is always safe to state the help that you got. For example, if you had help from someone else in writing a component of your code, it is not plagiarism as long as you state (eg, as a comment in the code) who helped you in writing the method.

Mandatory Requirements

1. Submission of a reasonable attempt of 8 of the 10 assignments.

Passing ECEN 421

To pass ECEN 421, a student must satisfy mandatory requirements and gain at least a **C-** grade overall.

Withdrawal

The last date for withdrawal from ECEN 421 with entitlement to a refund of tuition fees is Friday 11 March 2016. The last date for withdrawal without being regarded as having failed the course is Friday 13 May 2016 -- though later withdrawals may be approved by the Dean in special circumstances.

Rules & Policies

Find key dates, explanations of grades and other useful information at <http://www.victoria.ac.nz/home/study>.

Find out about academic progress and restricted enrolment at <http://www.victoria.ac.nz/home/study/academic-progress>.

The University's statutes and policies are available at <http://www.victoria.ac.nz/home/about/policy>, except qualification statutes, which are available via the Calendar webpage at <http://www.victoria.ac.nz/home/study/calendar> (See Section C).

Further information about the University's academic processes can be found on the website of the Assistant Vice-Chancellor (Academic) at <http://www.victoria.ac.nz/home/about/avcacademic>

All students are expected to be familiar with the following regulations and policies, which are available from the school web site:

[Grievances](#)

[Student and Staff Conduct](#)

[Meeting the Needs of Students with Disabilities](#)

[Student Support](#)

[Academic Integrity and Plagiarism](#)

[Dates and Deadlines including Withdrawal dates](#)

[School Laboratory Hours and Rules](#)

[Printing Allocations](#)

[Expectations of Students in ECS courses](#)

The School of Engineering and Computer Science strives to anticipate all problems associated with its courses, laboratories and equipment. We hope you will find that your courses meet your expectations of a quality learning experience.

If you think we have overlooked something or would like to make a suggestion feel free to talk to your course organiser or lecturer.
